Steps to Accountability: Roads

Building accountability that lasts.

Over the years, Area D Directors have worked hard advocating with the Ministry of Transportation for improvements to our local roads. They've built relationships, raised concerns, and helped get things done. I want to acknowledge and thank them for that work.

Much of this advocacy has historically been managed off the sides of their desks.

I believe it's time to break the cycle. As Area D Director, I would build a public-facing accountability system to track road concerns, coordinate advocacy, and hold the Ministry accountable. Most importantly, the tools and records would be passed on to successive Directors, ensuring continuity and accountability for years to come.

A public record of road concerns and commitments

My vision is to establish a publicly accessible road conditions and accountability website where residents can see which problems have been reported, what the Ministry has committed to doing, and when repairs are expected.

Residents would also have clear instructions on how to report concerns directly to the Ministry and keep their Director informed.

The Director would use this information to systematically follow up with the Ministry, track commitments, and report progress publicly.

Starting with specific road conditions

I contacted Ministry officials requesting inspections and maintenance consideration for serious road deterioration on Cedar Grove Road (pictured) and Gibbs Road.

We cannot direct the Ministry to fix our roads, but we can hold it accountable for responding to our concerns and following through on its commitments, and that starts by focusing all of our voices.

Accountability that survives elections

Most importantly, these tools and records would be passed on to future Directors, ensuring continuity and accountability regardless of who holds office.

Let's build a system that works for Roberts Creek today and for years to come.
